"We went with the "Weathered Face Sleeper Panels", and the product blew our expectations out of the water. Beautiful, rustic, recycled timber."

Instant Cladding

SIMPLE SYSTEM

Our innovative **modular walls** combine the bespoke qualities of age old timbers with the convenience of prefab construction.

This system makes our feature walls ideal for commercial applications and perfect for residential projects, including DIY.

These stunning reclaimed hardwoods are supplied in planks attached to a charcoal backing board, offset in a partial lip system for easy installation.

Recycled timber is a great choice in design.

Not only is it visually appealing and an acoustic insulator, it also ticks all the environmental and sustainability boxes.

Salvaged from old railway sleepers, demolished structures, and other sources, these timbers are given a new lease on life, reducing landfill waste and preserving our natural forests.

Every piece we craft tells a story.

The qualities found in reclaimed timbers are unlike those of new timber. Whilst the logging of old growth forests is fortunately now a thing of the past, the use of these beautiful timbers is not.

It is entirely feasible that the timber in some of our wall panels was around long before our cities were.

Now there's something to think about..

We're passionate about the environment and believe that great design shouldn't come at the planet's expense. By choosing our recycled timber solutions, you're contributing to a greener future while adding warmth and authenticity to your space.

Good Wood

THE RICHES OF RECYCLED

STYLISH & ELEGANT

WHEN PREFAB BECOMES FABULOUS.

Using prefabricated materials,
or "**prefab**", dramatically
speeds up construction time,
lowers material costs and
increases quality assurance.

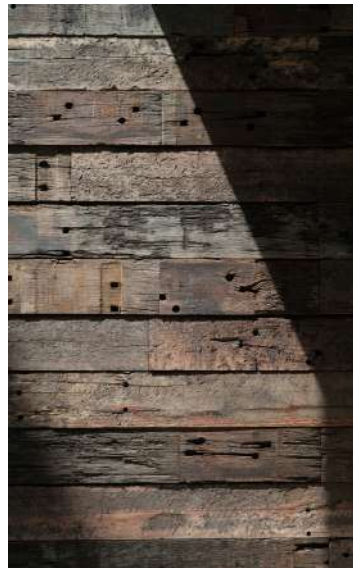

Each 'panel' comes in a set size of 2400mm (l) x 180mm (w) by approximately 25mm thick.

Varying lengths of recycled timbers are attached to an offset ply backing board, forming a lip system.

The face timbers are various widths, always equalling the 180mm panel width.

1 x 180mm | 2 x 90mm | 3 x 60mm | 1 x 90mm + 2 x 45mm

**ALL PANELS
2400 X 180MM**

The Panels.

Installation.

00:04:24.450

- Always commence at the bottom, left hand corner of the wall.
- Start with the first 2.4m length.
- Simply screw or nail through the exposed ply lip on the top of the panel into the studs frame or into the studs behind a sheeted wall.
- Continue to the end of the first row.
- Cut the board to fit and start the next row with the offcut from the previous row.
- The next board stacks on top and hides the fixings.
- Matching cover strips are supplied with all orders to cover the top ply lip, or to block edges if required.

COMMERCIAL

Recycled timber can be difficult to specify in design. From sourcing to installing, there can be many variables which can make it a risky choice for the designer or architect.

We have transformed a product that has been traditionally difficult to work with into a system that maintains absolute uniqueness whilst providing a standardised appearance and drastically reduced on-site labour.

This means that when you specify our products you can be confident that the overall finished look is exactly what you expected.

Our cladding system is immensely popular and features in a growing number of high profile projects across the country.

HOSPITALITY

CORPORATE

FIREPLACES

RESIDENTIAL

Timber walls are a wonderful way to add eye-catching dimension to a space, as well as ultimately achieving a standalone work of interior art.

Be it high-end multi-residential or the humble man-cave, our panels provide a simple means of incorporating the warmth, texture and organic elegance of timber into modern home design.

Combining style and sustainability, timber feature walls can be used to add to the ruggedness of rustic designs or harmonise with modern clean lines.

Our panels come in a variety of key styles and finishes, each suited to diverse uses and spaces.

EXTERNAL USE

All of our timber is suitable for outdoors if under cover.

If the area to be covered is exposed to the elements of sun and rain, some are more suitable than others.

If using our modular system, we can supply it with a marine ply backing board or simply without any backing board at all.

The most suitable styles are those taken from an already weathered, external face of recycled timber such as our wire brushed hardwood, artisan two and three board, wire brushed railway sides and artisan sides.

The narrower the board, the more stable the product.

Note that the colours and textures of all products will change with exposure and depending on the desired effect, may also require more maintenance.

THE MILL

Based in the beautiful Northern Rivers Region of NSW, we are proud to be pioneers in reimagining how recycled timber is used — combining sustainability with smart design to create products that are both practical and full of character.

Our mission is simple: to make it easier to build beautifully, without compromising the planet.

By innovating within Australia's recycled timber industry, we've developed a system that helps reduce waste, repurpose valuable resources, and celebrate the raw beauty of reclaimed wood.

We believe sustainability should be woven into the way we design, build, and live.
