 - ✓ Australia Wide Delivery
 - ✓ Range of Styles

"The way that the tiles inter-connect using an ingenious plinth with precision locating pins meant that we were able to lay them in just a couple of hours."

Instant Decking

ROOFTOPS & TERRACES

Modular decking tiles are the perfect solution for rooftop terraces as they do not impact the waterproofing membrane.

The connectors simply float over the substructure, leaving the membrane perfectly in tact, while still allowing for drainage and aeration.

STYLISH & ELEGANT

HIGH RISE. LOW PROFILE.

Perfect for balcony sliders and
outward opening doors.

Overall height of only 42mm.

BALCONIES - COMMERCIAL & RESIDENTIAL

A practical and effective decking system to lay over any solid sub-structure.
A spectacular transformation adding warmth and style.

An excellent option for property styling and tenants. Take them with you when you go!

RESIDENTIAL

Modular deck tiles
can be laid either
parallel or
perpendicular to
each other.

PATIOS & COURTYARDS

Our Decking Tiles are made from 100% solid Australian hardwood and are made locally in the Northern Rivers area of New South Wales. The deck tiles are pre-finished with UV protectant oils, so the tiles can be walked on the instant they are laid and are very easy to handle.

COMMERCIAL

High durability
Australian hardwoods
for heavy traffic areas..

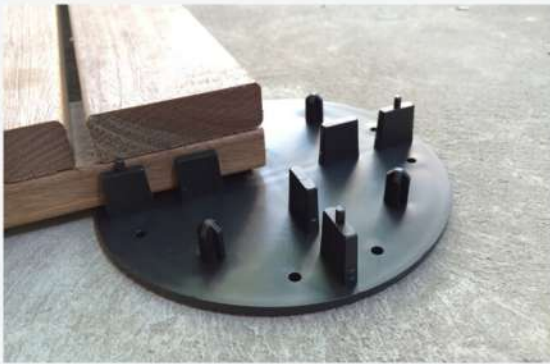

MOBILE EXHIBITIONS & TRADE SHOWS

Modular decking is the perfect choice for temporary applications. Fast to install and even faster to lift up, the tiles can be easily palletised for storage between events.

THE CONNECTORS

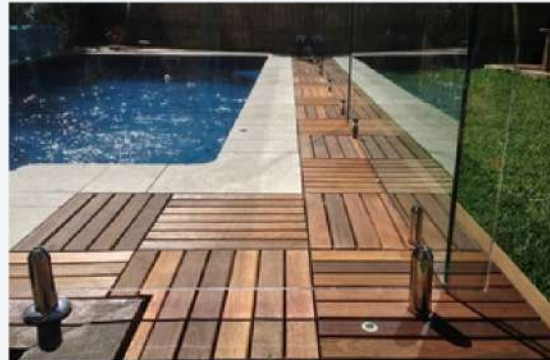

- The connecting pads are flat, round discs designed to rest on the substructure and do not require fixing to flat surfaces.
- They have a diameter of 145mm and a height of 4mm, raising the tiles off the ground to allow for drainage and aeration.
- They have locating pins that lock into pre-drilled holes on the underside of the tile and spacers to keep the tiles in place.
- They include screw holes for fixing to joists when required.
- They are made from a heavy duty polypropylene, using recycled materials when available.
- They are compatible with Versijack pedestal connectors.

Designer Tiles

350 x 350 x 38mm

Standard Tiles

500 x 500 x 38mm

Sleeper Tiles

615 x 615 x 38mm

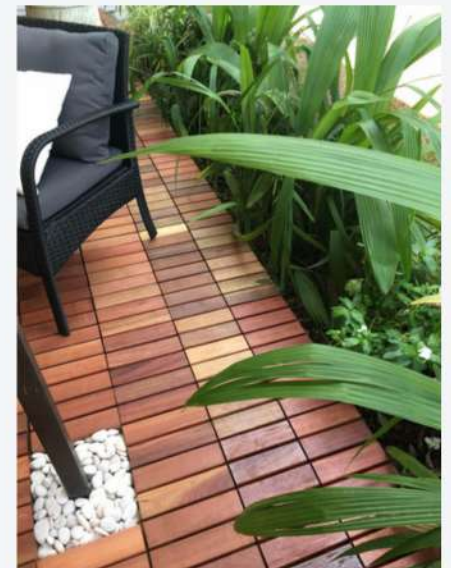

SUSTAINABLE

RANGE OF STYLES

We supply a range different styles and sizes of decking tiles all made locally with 100% Australian hardwood.

Our **Designer and Standard Tiles** are made from sustainably sourced and re-purposed decking boards. They are generally spotted gum and ironbark.

Our **Sleeper Tiles** are made from reclaimed railway sleepers and include timbers such as ironbark and tallowwood.

CAN BE STAINED

Generally supplied with one coat of decking oil to protect them through transport and installation.

The tiles can also be supplied raw to be stained to whatever the desired effect.
